How has the content changed?

- **There are fewer ethnic/racial groups.** The new demographic standards are modeled after the Census allowing clients to select more than one category to identify themselves. Clients who select more than one category will be reported to ADS as multi-racial.
- **New questions regarding household composition** – households with children and single parents. These questions are the result of the demographic alignment process with King County, United Way, City of Seattle/Human Services Department and the City of Bellevue.
- **Disability Status** – most of you collect this and we used to ask it, but stopped. It’s back on the list again as its part of the Core Demographics from the Outcome Alignment Group
- **Homeless** – a new one for most of you. Also a product of the demographic alignment process.
- **Unincorporated** – Does the client live in unincorporated King County? Many of you can probably default this to No if you serve only City residents.
- **Refugee Status** – for non I&A programs, this is loosely defined as anyone who is an immigrant, refugee, or new arrival to this country. Not intended to be a legal definition.
- **Shift from number codes to letter codes.** Provider feedback indicated a preference for using Y for Yes, N for No, etc., instead of integers. Some of you are already reporting this way; this may be a change for others.
- **Some fields were eliminated.** Original Service Begin, Unit Type, and Service Type are gone.

How has the format changed?

- All client demographics and service activity are in the same table – one row for each unit. If a client has units provided by multiple fund sources, use a separate row for each fund source. Most providers are already sending files this way.
- Three lines of headers are gone (no provider name in the file) – the top line is for field names. Some of you may already send files this way. Very important to use file names that make it clear what provider the data is from and for what time period.
- Both Excel and delimited files accepted (*.xls or *.txt).
- Text files can be delimited by comma, tab, or semi-colon.
- Field names must be at the top of each section and must exactly match those in the data specifications.
- Fields can be in any order – not required to use order in specs, with the exception of Client ID which should be the first column.
